squares'. In the area of matrices and graphs, specific topics addressed in this volume include energy of graphs, q -analog, invariants of matrices and graph realization of product of adjacency matrices. Topics in the book from 'Matrix Methods in Statistics' are, for example, the analysis of BLUE via eigenvalues of covariance matrix, copulas, error orthogonal model, and orthogonal projectors in the linear regression models. Moore-Penrose inverse of perturbed operators, reverse order law in the case of indefinite inner product space, approximation numbers, condition numbers, idempotent matrices, semiring of nonnegative matrices, regular matrices over incline and partial order of matrices are the topics addressed under the area of theory of generalized inverses. In addition to the above traditional topics and a

Alternative and Complementary Therapies for Cancer Moulay Alaoui-Jamali 2010-09-02 Cancer is a common disease with a devastating impact on the physical and psychological well being of patients. The diagnosis of cancer brings upon many clinical challenges and questions for which clear and simple answers are not always provided by modern medicine. To date, only limited therapeutic options are available for patients with advanced cancer. The recent shift toward targeted therapies has improved substantially patient's survival, however, relapses are frequent and cure remains rare. This led patients and many health care managers to shift attention to the holistic approach of traditional

medicine particularly preparations from herbal products to manage and alleviate the disease. Typically, herbal preparations contain single or multiple plant ingredients, including a number of potential active components. Yet, they remain classified as food supplements and thus are exempt from regulations on quality control and proof of efficacy that govern standard pharmaceuticals. Clinical evidence for many preparations is often based on non-documented or anecdotal evidence. In consequence, several preparations with unproven efficacy are circulating in the market with the fear of interference with standard cancer therapies and/or severe toxicity that some can generate, in addition to the unjustified economical burden to patients. Despite inconsistent and conflicting clinical results single molecules have been isolated from herbal

preparations and many are exploited to develop potential novel agents. This has fostered the need to organize a set of timely, in-depth and up-to-date review covering the latest developments in alternative cancer management from a scientific and clinical perspective dedicated to the medical community and health care providers, as well as to patients and their families. This book brings the latest comprehensive cancer information and practical recommendations on the best documented practice of alternative therapies for cancer management put together by recognized experts in the fields of medical oncology, traditional medicine, and cancer pharmacology. It goes hand-in-hand with the patient's medical treatment options, quality of life issues, and more. The book is organized into four major sections: The first is an overview of the cancer syndrome by

medical oncologists from the USA and Europe. The second is a comprehensive description of traditional medicine by renowned experts from China and Germany. The third is an overview on the pharmacological impact of herb-based formulations on standard chemotherapy agents used in clinical practice. The fourth is a survey of cases reports from several hospitals with approved practice of alternative medicine. The book will feature simple definitions and essential information grouped in both medical and lay-term terminology, and straightforward illustrations related to human physiology, disease definition, scientific data on know and potential mechanisms of action, and preventive approaches. Finally, the book will feature collaboration of experts from China, India, USA, Canada, Germany, France, and other centres

with recognized expertise in alternative/traditional medicine. This international cooperation is crucial to cover the complex topic of alternative therapies for cancer.
