### **Downsizing the Federal Government**

Chris Edwards 2005-11-25 The federal government is running huge budget deficits, spending too much, and heading toward a financial crisis. Federal spending soared under President George W. Bush, and the costs of programs for the elderly are set to balloon in coming years. Hurricane Katrina has made the federal budget situation even more desperate. In *Downsizing the Federal Government* Cato Institute budget expert Chris Edwards provides policymakers with solutions to the growing federal budget mess. Edwards identifies more than 100 federal programs that should be terminated, transferred to the states, or privatized in order to balance the budget and save hundreds of billions of dollars. Edwards proposes a balanced reform package of cuts to entitlements, domestic programs, and excess defense spending. He argues that these cuts would not only eliminate the deficit, but also strengthen the economy, enlarge personal freedom, and leave a positive fiscal legacy for the next generation. *Downsizing the Federal Government* discusses the systematic causes of wasteful spending, and it overflows with examples of federal programs that are obsolete and mismanaged. The book examines the budget process and shows how policymakers act contrary to the interests of average Americans by favoring special interests.

*Assessing 21st Century Skills* National Research Council 2011-09-16 The routine

jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five

skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking  
Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity  
Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning  
Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

**Advanced Problems in Mathematics** Stephen Siklos 2020-10-09 This new and expanded edition is intended to help

candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. *Advanced Problems in Mathematics* bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This

book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics.
