The Measurement of Observer Agreement for Categorical Data

This paper presents a general statistical methodology for the analysis of multivariate categorical data. It indexes a set of sub-populations from which random samples have been selected. Suppose that the same response variable is measured separately by each ... where π_{ij} is an observational probability of agreement and w_{ij} is a hypothetical expected

Deep End-to-end Causal Inference - arXiv

They aspire to estimate treatment effects from observational data, with incomplete or no knowledge of the causal relationships between variables. This is the end-to-end causal inference problem, displayed in Figure 1, where we discover the causal graph and estimate treatment effects together using weaker causal assumptions and observational data.
