The First Year Dr Lachlan Rathie Fanzca 2016-04-26
Some common clinical questions: - What are the criteria for extubation? - What is the intubating dose of rocuronium for a patient who weighs 150kg? - How do I interpret a post tetanic count? - How do I manage a LMA with a leak? - What's the point of giving midazolam on induction? - Should I use a cuffed tube in a 4 year old? - How do I give a child a TIVA? - How do I intubate someone without muscle relaxants? - How do changes in cardiac output affect the induction dose of propofol? - Do I have to abandon my anaesthetic machine if there is a power board failure? This book answers those questions and a whole lot more. It is not an exam primer nor is it a comprehensive textbook of anaesthesia. This is the book you give to the trainee specialist who is about to embark on their anaesthesia training. It contains the information they need to formulate and develop a safe practice of anaesthesia. This book lucidly describes and justifies the core knowledge, behaviours and practice that a junior trainee would be expected to possess after a year of anaesthesia. Written specifically for Australasian anaesthetic trainees

and GP registrars doing their JCCA advanced skills post, this book fills the gaping hole in the existing anaesthetic literature. This book aspires to take the relevant bits of a pharmacology textbook, a physiology textbook, a clinical anaesthesia textbook, an anaesthetics emergency manual and a perioperative medicine guide and tie them together in a succinct but sufficiently detailed volume. This book has been written with the intention of being relevant, up to date, pragmatic and entertaining. Written by a former rural GP, now Senior Staff Anaesthetist, Supervisor of Training and incorrigible cynic; this is the book he would have liked to have when he embarked on his First Year.

To Advance Knowledge Roger L. Geiger 2017-09-29 American research universities are part of the foundation for the supremacy of American science. Although they emerged as universities in the late nineteenth century, the incorporation

of research as a distinct part of their mission largely occurred after 1900. To Advance Knowledge relates how these institutions, by 1940, advanced from provincial outposts in the world of knowledge to leaders in critical areas of science. This study is the first to systematically examine the preconditions for the development of a university research role. These include the formation of academic disciplines--communities that sponsored associations and journals, which defined and advanced fields of knowledge. Only a few universities were able to engage in these activities. Indeed, universities before World War I struggled to find the means to support their own research through endowments, research funds, and faculty time. To Advance Knowledge shows how these institutions developed the size and wealth to harbor a learned faculty. The book illustrates how arrangements for research changed markedly in the 1920s when the great foundations established from the Rockefeller and Carnegie fortunes embraced the advancement of knowledge as a goal. Universities emerged in this decade as the best-suited vessels to carry this mission. Foundation resources made possible the development of an American social science. In the natural sciences, this patronage allowed the United States to gain parity with Europe on scientific frontiers, of which the most important was undoubtedly nuclear physics. The research role of universities cannot be isolated from the institutions themselves. To Advance Knowledge focuses on sixteen universities that were significantly engaged with research during this era. It analyzes all facets of these institutions--collegiate life, sources of funding, treatment of faculty--since all were relevant to shaping the research role.

[Blueprint to cyanotypes - Exploring a historical alternative photographic process](#)

Malin Fabbri 2016-01-01 An excellent beginners' guide to cyanotypes - all you need to get started, and some goodies for more advanced cyanotypers too. About the book The cyanotype is often the first alternative process that people try. It is relatively easy and safe enough to nurture a child's interest in photography. It can also be seen as a gateway to further exploration of historic photographic methods. In addition, it gives experienced photographers and artists a great excuse to take their eyes off the computer screen and get their hands dirty. Blueprint to cyanotypes is all you will need to get started with cyanotypes. It offers the beginner a step-by-step guide, from choosing material to making the final print. It is full of information and tips. Even the experienced cyanotypist may learn a thing or two. Blueprint to cyanotypes is published by AlternativePhotography.com - a website and information center dedicated to alternative photographic

processes. From Malin Fabbri, the author: Why a book on cyanotypes? Of all the alternative processes the cyanotype is the one closest to my heart. I made my first cyanotype in 1999. I was intrigued by the blue images and wanted to test the cyanotype process to see what it had to offer. I bought chemicals and spent an evening coating paper and cloth. The results of the next day's printing surprised me. Although the alchemy of the darkroom had always captivated me, developing a print in the sun was like a liberation. One of the things I found most refreshing about the process was the unpredictability of the results. Some of my best prints were the product of 'happy accidents'. The developing process is straightforward. The chemicals are cheap, and most of the other items used can be found around the house. Pre-coated paper is available, but one of the benefits of working with cyanotypes is the great flexibility of material and paper available to you. Cyanotypes print on anything made of natural fibre.

Cotton, linen, silk, handmade paper, watercolor paper and rags are just a number of alternatives. Some artists even print on wood. So, if you want to explore a fun alternative photographic process or seriously want to experiment with producing unique fine art, make a cyanotype.

[Bonding Before Birth](#)

Miriam Stoppard 2008-04-21 Bonding Before Birth combines up-to-the-minute research with enlightened and compassionate wisdom. This book explores what science knows about babies in the womb and explains why mother-baby bonding is so vital for the future well-being of mother, father, and baby. Dr. Miriam Stoppard writes about the feelings that expectant parents experience during the first, second and third trimesters and promotes the significance of rites of

passage through pregnancy, from adjusting to the changes that parenthood brings to celebrating your future as a family. The emotional and psychological elements of pregnancy are often overlooked in favor of hard facts and scientific evidence. This book redresses the balance and turns its attention to the conflicting feelings of exhilaration and anxiety, dreams and fears that so often characterize the nine months of pregnancy and gives parents-to-be inspiring guidance through these uncharted waters.

Neo-Hindutva Edward Anderson

2020-06-30 Neo-Hindutva explores the recent proliferation and evolution of Hindu nationalism - the assertive majoritarian, right-wing ideology that is transforming contemporary India. This volume develops and expands on the idea of 'neo-Hindutva' -- Hindu nationalist ideology which is evolving and shifting in new, surprising, and significant ways,

requiring a reassessment and reframing of prevailing understandings. The contributors identify and explain the ways in which Hindu nationalism increasingly permeates into new spaces: organisational, territorial, conceptual, rhetorical. The scope of the chapters reflect the diversity of contemporary Hindutva - both in India and beyond - which appears simultaneously brazen but concealed, nebulous and mainstreamed, militant yet normalised. They cover a wide range of topics and places in which one can locate new forms of Hindu nationalism: courts of law, the Northeast, the diaspora, Adivasi (tribal) communities, a powerful yoga guru, and the Internet. The volume also includes an in-depth interview with Christophe Jaffrelot and a postscript by Deepa Reddy. Helping readers to make sense of contemporary Hindutva, Neo-Hindutva is ideal for scholars of India, Hinduism, Nationalism, and Asian Studies more generally. This book was originally published as a special issue of Contemporary South Asia.

Dongri to Dubai - Six Decades of the Mumbai Mafia Hussain Zaidi 2012-08-10

Dongri to Dubai is the first ever attempt to chronicle the history of the Mumbai mafia. It is the story of

notorious gangsters like Haji Mastan, Karim Lala, Varadarajan Mudaliar, Chhota Rajan, Abu Salem, but above all, it is the story of a young man who went astray despite having a father in the police force. Dawood Ibrahim was initiated into crime as a pawn in the hands of the Mumbai police and went on to wipe out the competition and eventually became the Mumbai police's own nemesis. The narrative encompasses several milestones in the history of crime in India, from the rise of the Pathans, formation of the Dawood gang, the first ever supari, mafia's nefarious role in Bollywood, Dawood's move to Karachi, and Pakistan's subsequent alleged role in sheltering one of the most wanted persons in the world. This story is primarily about how a boy from Dongri became a don in Dubai, and captures his bravado, cunningness, focus, ambition, and lust for power in a gripping narrative. The meticulously researched book provides an in-depth and comprehensive account of the mafia's games of supremacy and internecine warfare.

Studia Instrumentorum Musicae

Popularis Gisa Jähnichen 2009 "The New Series of the ICTM Study Group Journal STUDIA INSTRUMENTORUM MUSICAE POPULARIS starts with a broad overview on the topics "Percussion" and "Migration of Musical Instruments", an outcome of the 17th Meeting of the Study Group on Folk Musical Instruments, held in Erkner near Berlin from April 1-4, 2009. 25 scholars from 15 countries contributed articles to the volume, which appear in their alphabetical order due to the fact that clear borders cannot and should not be delineated. Moreover, the editors leave it to the readers' community to discuss hierarchies regarding their importance or their qualitative refinement for discussion and further improvements are the main aim of the publication. Since 1969, when the Musikhistoriska museet in Stockholm has published its first volume of the journal, edited by Erich Stockmann, many fields of organological research have changed their methodological repertoire, their interdisciplinary

tools and especially their non-instrumental focus on complex subjects. Nevertheless, classical working methods are still highly esteemed as a basic precondition for detailed discoveries using modern technology and external expertise. The volume comprises papers of authors, who already contributed to the journal's former series in their youth, as well as those of authors with their first journal publication, who are just starting to explore their scientific scope. Thus this volume brings together generations of scholars with different experiences and their open minded curiosity about each other. Challenging discussions and a wide field of interdisciplinary connections enriched their outcomes and will help to create new scientific spaces beyond the tangibility of musical instruments and the intangibility of musical sound."--Publisher description.

Einstein's Dreams Alan Lightman 2011-03-02 A modern classic, Einstein's Dreams is a fictional collage of stories dreamed by Albert Einstein in 1905, about time, relativity and physics. As the defiant but sensitive young genius is creating his theory of relativity, a new conception of time, he imagines many possible worlds. In one, time is circular, so that people are fated to repeat triumphs and failures over and over. In another, there is a place where time stands still, visited by lovers and parents clinging to their children. In another, time is a nightingale, sometimes trapped by a bell jar. Now translated into thirty languages, Einstein's Dreams has inspired playwrights, dancers, musicians, and painters all over the world. In poetic vignettes, it explores the connections between science and art, the process of creativity, and ultimately the fragility of human existence.
