2013-01-01 Freitag's
MATHEMATICS FOR
ELEMENTARY SCHOOL
TEACHERS: A PROCESS
APPROACH was developed
using the five Content
Standards from the NCTM
Principles and Standards
for School Mathematics,
and the Common Core
State Standards for
Mathematics.
Traditionally, books for
pre-service elementary
teachers have focused on
problem solving.
However, problem solving
is not the only process
through which
mathematics is learned.
It is also learned
through mathematical
reasoning,
communication,
representation, and
connections. Recent

trends in mathematics
education now advocate
implementing all five
processes as a vital
part of learning and
doing mathematics.
Consequently, you need
to have concrete
experiences with these
processes that you will
be required to teach.
The goal of this book is
to treat each of the
processes equitably by
using an approach in
which the five processes
serve as the central
pedagogical theme. Most
of the examples,
exercises, and
activities are designed
to either model the
processes or to directly
engage you in working
with them. As a result,
you will not only come
to understand the
different processes, but
also appreciate them as
an integral to learning
and doing mathematics.
If this broader view can
be instilled, you are
more likely to give your
students a more well-
rounded and holistic
view of mathematics once
you enter the classroom.
The content of the book
is directly related to

the mathematics that is taught in grades K - 8. The purpose is not to reteach elementary mathematics. Rather, the intent is to look at the content from a theoretical or generalized point of view, so that you can better understand the concepts and processes behind the mathematics you will teach. In short, the book focuses on the why behind the mathematics in addition to the how. Available with InfoTrac Student Collections
