Physical Assessment of the Newborn
Ellen P. Tappero, DNP, RN, NNP-BC
2014-09-01 Physical Assessment of the Newborn, 5th Edition, is a comprehensive text with a wealth of detailed information on the assessment of the newborn. This valuable and essential resource illustrates the principles and skills needed to gather assessment data systematically and accurately, and also provides a knowledge base for interpretation of this data. Coverage addresses: gestational assessment, neurologic assessment, neonatal

history, assessment of the dysmorphic infant, and systemic evaluation of individual body systems, as well as key information on behavioral and pain assessment, including the use of specific tools with various groups ranging from term to extremely preterm infants. Numerous tables, figures, illustrations, and photos, many of them in full color, are a major strength that enhances the book's usefulness as a clinical resource. The text is an excellent teaching tool and resource for anyone who performs newborn examinations including nurses, neonatal and pediatric nurse practitioners, nurse-midwives, physicians and therapists. It can also serve as a core text for any program preparing individuals for advanced practice roles in neonatal care. KEY FEATURES: An authoritative

and renowned text that comprehensively addresses all key aspects of newborn assessment Provides a well-ordered evaluation of individual body systems. Assists the practitioner in identifying infant state, behavioral clues, and signs of pain, facilitating individualized care. Comprehensively addresses the tremendous range of variation among newborns of different gestational ages. The content is amplified by numerous photos and illustrations, many in full color Includes Power Point slides and an Image Bank

Regulating Aged Care John Braithwaite
2007-01-01 'Regulating Aged Care is a significant achievement and addresses areas of personal caring which do not usually receive attention. [It] is an

important book which draws attention to the central problems of providing care for large numbers of vulnerable people. . . [it] should be required reading on undergraduate and postgraduate courses relating to applied social science, health and medical sociology.' Alison M. Ball, Sociology 'This book provides an impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field.' International Social Security Review 'They have given us a fascinating case study here, rich in detail, and masterfully interpreted against the backdrop of evolving regulatory strategy. It is rare indeed to find this depth of analysis made accessible, laced throughout with humanity, compassion, and humor.' Malcolm Sparrow, Harvard

University, US 'This book offers an intelligent and insightful account of the development of nursing home regulation in three countries England, the USA and Australia. But, more than that, it intertwines theory and more than a decade of empirical work to provide a telling and sophisticated explanation of why and how good regulatory intentions often go awry, and what can be done to create systems of regulation which really work to produce improvement.'

Kieran Walshe, University of Manchester, UK This book is a major contribution to regulatory theory from three members of the world-class regulatory research group based in Australia. It marks a new development in responsive regulatory theory in which a strengths-based pyramid complements the regulatory pyramid.

The authors compare the accomplishments of nursing home regulation in the US, the UK and Australia during the last 20 years and in a longer historical perspective. They find that gaming and ritualism, rather than defiance of regulators, are the greatest challenges for improving safety and quality of life for the elderly in care homes. *Regulating Aged Care* shows how good regulation and caring professionalism can transcend ritualism. Better regulation is found to be as much about encouragement to expand strengths as incentives to fix problems. The book is underpinned by one of the most ambitious, sustained qualitative and quantitative data collections in both the regulatory literature and the aged care literature. This study provides an

impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field. The book will find its readership amongst regulatory scholars in political science, law, socio-legal studies, sociology, economics and public policy. Gerontology and health care scholars and professionals will also find much to reflect upon in the book.

Restorative Care Nursing for Older

Adults Barbara Resnick 2011-12-05
Restorative care nursing, currently referred to as function focused care, is a philosophy and method of care that enables caregivers to actively help older adults achieve and maintain their highest level of function. This is the only volume written to educate caregivers and administrators about the philosophy of restorative care and how to integrate this philosophy in all types of care settings. This updated second edition contains new content in each chapter along with several entirely new chapters on function-focused care for cognitively impaired adults, ethical issues, and patient-centered

Spying on Science Paul Maddrell

2006-02-16 The years 1945-61 saw the greatest transformation in weaponry that has ever taken place, as atomic and thermonuclear bombs, intercontinental ballistic missiles and chemical and biological weapons were developed by the superpowers. It was also a distinct era in Western intelligence collection. These were the years of the Germans. Mass interrogation in West Germany and spying in East Germany represented the most important source of intelligence on Soviet war-related science, weapons development and military capability until 1956 and a key one until 1961. This intelligence fuelled the arms race and influenced Western scientific research, weapons development, and intelligence collection. Using intelligence and policy documents held in British and

US archives and records of the Ministry of State Security (MfS) of the former German Democratic Republic (GDR), this book is the most penetrating study of the scientific intelligence-gathering and subversive operations of the British, US, and West German intelligence services in the period to date. East Germany's scientific potential was contained by inducing leading scientists and engineers to defect to the West, and Paul Maddrell shows that the US Government's policy of 'containment' was more aggressive than has hitherto been accepted. He also demonstrates that the Western secret services' espionage in the GDR was very successful, even though the MfS and KGB achieved triumphs against them. George Blake twice did appalling damage the MI6's spy networks. The

book reveals the identity of the most distinguished scientist to spy for the CIA as yet uncovered.

Psychiatric and Mental Health Nursing
Phil Barker 2008-12-26 Supported by
relevant theory, research, policy,
and philosophy, this second edition
of *Psychiatric and Mental Health*
Nursing: The craft of caring provides
a comprehensive overview of the
practice of psychiatric and mental
health nursing. The concept of "the
craft of caring" dictates that the

basis of good nursing practice is a
combination of both art and science,
encouraging nurses to take a holistic
approach to the practice of
psychiatric and mental health
nursing. Reflecting current
developments in nursing practice and
the understanding of mental health
disorders, this edition includes
twelve additional chapters, placing
more emphasis on specific groups such
as children and young people, women,
older people, asylum seekers, and
refugees. Case studies include
patients with anxiety, schizophrenia,
and bipolar disorder as well as
victims of sexual abuse, those with
an eating disorder, homeless
patients, and those with dementia and
autism. The book also examines
specialist services such as
psychiatric liaison and spiritual

care and includes discussion on psychiatric diagnosis and mental health legislation in relation to human rights. This is an essential text for all psychiatric and mental health nurses at the diploma and degree level, as well as qualified mental health nurses seeking to update their knowledge. It will also be a useful reference for professionals in other disciplines such as social work, medicine, and psychology.

Edition Marie Boltz, PhD, RN, GNP-BC, FGSA, FAAN 2016-03-28 This new edition of one of the premier references for geriatric nurses in hospital, long-term, and community settings delivers current guidelines, real-life case studies, and evidence-based protocols developed by master educators and practitioners. With a focus on improving quality of care, cost-effectiveness, and outcome, the fifth edition is updated to provide the most current information about care of common clinical conditions and issues in older patients. Several new expert contributors present current guidelines about hip fractures, frailty, perioperative and postoperative care, palliative care, and senior-friendly emergency departments. Additionally, chapters have been reorganized to enhance

logical flow of content and easy information retrieval. Protocols, systematically tested by more than 300 participating NICHE (Nurses Improving Care for Health system Elders) hospitals, are organized in a consistent format and include an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion. Additionally, protocols are embedded within chapter text, providing the context and detailed evidence for each. Chapter objectives, annotated references, and evidence ratings for each protocol are provided along with resources for additional study. New to the Fifth Edition: Reorganized to enhance logical flow of information and ease of use Updated and revised Includes new contributions from expert

educators and practitioners Provides new chapters on perioperative and postoperative care, general surgical care, care of hip fracture, palliative care, and the senior-friendly emergency department Key Features: Includes PowerPoints and a test bank for instructors Delivers evidence-based, current guidelines and protocols for care of common clinical conditions in the older person Illustrates the application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known geriatric leaders who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

Palliative Care for Advanced Alzheimer's and Dementia Jennifer V. Long, CRNA, CRNP, MS 2010-07-23 2010 AJN Book of the Year Award Winner in both Gerontologic Nursing and Hospice and Palliative Care! "This book...provides important information on best practices and appropriate ways to care for a person with Alzheimer's and advanced dementia. Drs. Martin and Sabbagh have assembled a team of experts to help craft recommendations that should ultimately become standards that all professional caregivers adopt." - Michael Reagan Son of former President Ronald Reagan President, Reagan Legacy Foundation This book testifies that caregivers can have a

monumental impact on the lives of persons with advanced dementia. Through specialized programming and a renewed effort toward patient-centered care, caregivers can profoundly enrich the quality of life for these persons. Providing guidelines for health care professionals, caregivers, and family members, this book introduces palliative care programs and protocols for the treatment of people with advanced dementia. The book is designed to guide professional caregivers in meeting the needs of patients and their families, providing insight into the philosophy, assessment, planning, implementation, and evaluation measures involved in interdisciplinary palliative care. The chapter authors offer guidelines

and standards of care based on contributions from nurses, physical therapists, social workers, dietitians, psychologists, family caregivers and pastors. An exhibit at the end of every chapter clearly articulates the standards of care appropriate for all advanced dementia facilities and health care staff. This book helps caregivers: Enhance the physiological, psychological, social, and spiritual well-being of the patient and the patient's family Anticipate and meet the patient's basic human needs: hunger, thirst, body positioning, hygiene, continence, and management of any pain Ensure that the patient's surroundings are safe, comfortable, and homelike Address health care decisions that will support the patient's right to self-determination

until the end of life

Care of the Acutely Ill Adult Fiona Creed 2020-10-08 This key textbook equips all nurses with the knowledge and skills required to care for the deteriorating patient in the clinical environment. The book emphasises the importance of systematic assessment, interpretation of clinical signs of

deterioration, and the need to escalate the patient in a timely manner. Using a unique system-based approach, each chapter contains structured learning outcomes and concludes with a competence-based skills assessment to perfect the reader's practice skills. These skills are recommended as essential for every nurse in an acute area and key to successful practice. Restructured for ease of use, this new edition has been fully updated to match current guidelines, with new chapters on pain management and the ethics and ceilings of treatment. Written by senior nurses, this key textbook uses real life case studies to link knowledge to practice and is essential reading for all nurses working in acute care settings and undertaking study in the field.

Making Healthcare Safe Lucian L. Leape 2021-05-28 This unique and engaging open access title provides a compelling and ground-breaking account of the patient safety movement in the United States, told from the perspective of one of its most prominent leaders, and arguably the movement's founder, Lucian L. Leape, MD. Covering the growth of the field from the late 1980s to 2015, Dr. Leape details the developments, actors, organizations, research, and policy-making activities that marked the evolution and major advances of patient safety in this time span. In addition, and perhaps most importantly, this book not only comprehensively details how and why human and systems errors too often occur in the process of providing

health care, it also promotes an in-depth understanding of the principles and practices of patient safety, including how they were influenced by today's modern safety sciences and systems theory and design. Indeed, the book emphasizes how the growing awareness of systems-design thinking and the self-education and commitment to improving patient safety, by not only Dr. Leape but a wide range of other clinicians and health executives from both the private and public sectors, all converged to drive forward the patient safety movement in the US. *Making Healthcare Safe* is divided into four parts: I. *In the Beginning* describes the research and theory that defined patient safety and the early initiatives to enhance it. II. *Institutional Responses* tells the

stories of the efforts of the major organizations that began to apply the new concepts and make patient safety a reality. Most of these stories have not been previously told, so this account becomes their histories as well. III. Getting to Work provides in-depth analyses of four key issues that cut across disciplinary lines impacting patient safety which required special attention. IV. Creating a Culture of Safety looks to the future, marshalling the best thinking about what it will take to achieve the safe care we all deserve. Captivatingly written with an “insider’s” tone and a major contribution to the clinical literature, this title will be of immense value to health care professionals, to students in a range of academic disciplines, to medical

trainees, to health administrators, to policymakers and even to lay readers with an interest in patient safety and in the critical quest to create safe care.
