**Making Healthcare Safe** Lucian L. Leape 2021-05-28 This unique and engaging open access title provides a compelling and ground-breaking account of the patient safety movement in the United States, told from the perspective of one of its most prominent leaders, and arguably the movement's founder, Lucian L. Leape, MD. Covering the growth of the field from the late 1980s to 2015, Dr. Leape details the developments, actors, organizations, research, and policy-making activities that marked the evolution and major advances of patient safety in this time span. In addition, and perhaps most importantly, this book not only comprehensively details how and why human and systems errors too often occur in the process of providing health care, it also promotes an in-depth understanding of the principles and practices of patient safety, including how they were influenced by today's modern safety sciences and systems theory and design. Indeed, the book emphasizes how the growing awareness of systems-design thinking and the self-education and commitment to improving patient safety, by not only Dr. Leape but a wide range of

other clinicians and health executives from both the private and public sectors, all converged to drive forward the patient safety movement in the US. Making Healthcare Safe is divided into four parts: I. In the Beginning describes the research and theory that defined patient safety and the early initiatives to enhance it. II. Institutional Responses tells the stories of the efforts of the major organizations that began to apply the new concepts and make patient safety a reality. Most of these stories have not been previously told, so this account becomes their histories as well. III. Getting to Work provides in-depth analyses of four key issues that cut across disciplinary lines impacting patient safety which required special attention. IV. Creating a Culture of Safety looks to the future, marshalling the best thinking about what it will take to achieve the safe care we all deserve. Captivatingly written with an "insider's" tone and a major contribution to the clinical literature, this title will be of immense value to health care professionals, to students in a range of academic disciplines, to medical trainees, to health administrators, to policymakers and even to lay readers with an interest in patient

safety and in the critical quest to create safe care.

*Palliative Care for Advanced Alzheimer's and Dementia* Jennifer V. Long, CRNA, CRNP, MS 2010-07-23 2010 AJN Book of the Year Award Winner in both Gerontologic Nursing and Hospice and Palliative Care! "This book...provides important information on best practices and appropriate

ways to care for a person with Alzheimer's and advanced dementia. Drs. Martin and Sabbagh have assembled a team of experts to help craft recommendations that should ultimately become standards that all professional caregivers adopt." - Michael Reagan Son of former President Ronald Reagan President, Reagan Legacy Foundation This book testifies that caregivers can have a monumental impact on the lives of persons with advanced dementia. Through specialized programming and a renewed effort toward patient-centered care, caregivers can profoundly enrich the quality of life for these persons. Providing guidelines for health care professionals, caregivers, and family members, this book introduces palliative care programs and protocols for the treatment of people with advanced dementia. The book is designed to guide professional caregivers in meeting the needs of patients and their families, providing insight into the philosophy, assessment, planning, implementation, and evaluation measures involved in interdisciplinary palliative care. The chapter authors offer guidelines and standards of care based on contributions from nurses, physical therapists, social workers, dietitians, psychologists, family caregivers and pastors. An exhibit at the end of every chapter clearly articulates the standards of care appropriate for all advanced dementia facilities and health care staff. This book helps caregivers: Enhance the physiological, psychological, social, and spiritual well-being of the patient and the patient's family Anticipate and meet the patient's basic human needs: hunger, thirst, body positioning, hygiene, continence, and management of any pain Ensure that the patient's

surroundings are safe, comfortable, and homelike Address health care decisions that will support the patient's right to self-determination until the end of life

**Spying on Science** Paul Maddrell  
2006-02-16 The years 1945-61 saw the greatest transformation in weaponry that has ever taken place, as atomic and thermonuclear bombs, intercontinental ballistic missiles and chemical and biological weapons were developed by the superpowers. It was also a distinct era in Western intelligence collection. These were the years of the Germans. Mass interrogation in West Germany and spying in East Germany represented the most important source of intelligence on Soviet war-related science, weapons development and military capability until 1956 and a key one until 1961. This intelligence fuelled the arms race and influenced Western scientific research, weapons development, and intelligence collection. Using intelligence and policy documents held in British and US archives and records of the Ministry of State Security (MfS) of the former German Democratic Republic (GDR), this book is the most penetrating study of the scientific

intelligence-gathering and subversive operations of the British, US, and West German intelligence services in the period to date. East Germany's scientific potential was contained by inducing leading scientists and engineers to defect to the West, and Paul Maddrell shows that the US Government's policy of 'containment' was more aggressive than has hitherto been accepted. He also demonstrates that the Western secret services' espionage in the GDR was very successful, even though the MfS and KGB achieved triumphs against them. George Blake twice did appalling damage the MI6's spy networks. The book reveals the identity of the most distinguished scientist to spy for the CIA as yet uncovered.

#### **Psychiatric and Mental Health Nursing**

Phil Barker 2008-12-26 Supported by relevant theory, research, policy, and philosophy, this second edition of Psychiatric and Mental Health Nursing: The craft of caring provides a comprehensive overview of the practice of psychiatric and mental health nursing. The concept of "the

craft of caring" dictates that the basis of good nursing practice is a combination of both art and science, encouraging nurses to take a holistic approach to the practice of psychiatric and mental health nursing. Reflecting current developments in nursing practice and the understanding of mental health disorders, this edition includes twelve additional chapters, placing more emphasis on specific groups such as children and young people, women, older people, asylum seekers, and refugees. Case studies include patients with anxiety, schizophrenia, and bipolar disorder as well as victims of sexual abuse, those with an eating disorder, homeless patients, and those with dementia and autism. The book also examines specialist services such as psychiatric liaison and spiritual care and includes discussion on psychiatric diagnosis and mental health legislation in relation to human rights. This is an essential text for all psychiatric and mental health nurses at the diploma and degree level, as well as qualified mental health nurses seeking to update their knowledge. It will also be a useful reference for professionals in other disciplines such as social work, medicine, and psychology.

### **Kansas Administrative Regulations**

Kansas. Secretary of State 1995  
Regulating Aged Care John Braithwaite 2007-01-01 'Regulating Aged Care is a significant achievement and addresses areas of personal caring which do not usually receive attention. [It] is an important book which draws attention to the central problems of providing care for large numbers of vulnerable people. . . [it] should be required reading on undergraduate and postgraduate courses relating to applied social science, health and medical sociology.' Alison M. Ball, Sociology 'This book provides an impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field.' International Social Security Review 'They have given us a fascinating case study here, rich in detail, and masterfully interpreted against the backdrop of evolving regulatory strategy. It is rare indeed to find this depth of analysis made accessible, laced throughout with humanity, compassion, and humor.' Malcolm Sparrow, Harvard University, US 'This book offers an intelligent and insightful account of the development of nursing home regulation in three countries England, the USA and Australia. But, more than that, it intertwines theory

and more than a decade of empirical work to provide a telling and sophisticated explanation of why and how good regulatory intentions often go awry, and what can be done to create systems of regulation which really work to produce improvement.' Kieran Walshe, University of Manchester, UK This book is a major contribution to regulatory theory from three members of the world-class regulatory research group based in Australia. It marks a new development in responsive regulatory theory in which a strengths-based pyramid complements the regulatory pyramid. The authors compare the accomplishments of nursing home regulation in the US, the UK and Australia during the last 20 years and in a longer historical perspective. They find that gaming and ritualism, rather than defiance of regulators, are the greatest challenges for improving safety and quality of life for the elderly in care homes. Regulating Aged Care shows how good regulation and caring professionalism can transcend ritualism. Better regulation is found to be as much about encouragement to expand strengths as incentives to fix problems. The book is underpinned by one of the most ambitious, sustained qualitative and quantitative data collections in both the regulatory literature and the aged care literature. This study provides an impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field. The book will find its readership amongst regulatory scholars in political science, law, socio-legal studies, sociology, economics and public policy. Gerontology and health care scholars and professionals will also find much to reflect upon in the book.
