Methods for Applied Macroeconomic Research Fabio Canova

2011-09-19 The last twenty years have witnessed tremendous advances in the mathematical, statistical, and computational tools available to applied macroeconomists. This rapidly evolving field has redefined how researchers test models and validate theories. Yet until now there has been no textbook that unites the latest methods and bridges the divide between theoretical and applied work. Fabio Canova brings together dynamic equilibrium theory, data analysis, and advanced econometric and computational methods to provide the first comprehensive set of techniques for use by academic economists as well as professional macroeconomists in banking and finance, industry, and government. This graduate-level textbook is for readers knowledgeable in modern macroeconomic theory, econometrics, and computational programming using RATS, MATLAB, or Gauss. Inevitably a modern treatment of such a complex topic requires a quantitative perspective, a solid dynamic theory background, and the development of empirical and numerical methods--which is where Canova's book differs from typical graduate textbooks in macroeconomics and econometrics. Rather than list a series of estimators and their properties, Canova starts from a class of DSGE

models, finds an approximate linear representation for the decision rules, and describes methods needed to estimate their parameters, examining their fit to the data. The book is complete with numerous examples and exercises. Today's economic analysts need a strong foundation in both theory and application. *Methods for Applied Macroeconomic Research* offers the essential tools for the next generation of macroeconomists.

Prohibitions, Price Caps, and Disclosures Signe-Mary McKernan 2011-06-01 This study uses new nationally representative data from the National Financial Capability State-by-State Survey to examine the relationship between state-level alternative financial service (AFS) policies (prohibitions, price caps, disclosures) and consumer use of five AFS products: payday loans, auto title loans, pawn broker loans, refund anticipation loans, and rent-to-own transactions. The results suggest that more stringent price caps and prohibitions are associated with lower product use and do not support the hypothesis that prohibitions and price caps on one AFS product lead consumers to use other AFS products. India Rubber Review 1922

Intellectual Property, Growth and Trade Keith Eugene Maskus 2008 In recent years intellectual property rights (IPR) took on major significance as an element of global trade regulation. The Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) at the World Trade Organization (WTO) obliges member countries to protect patents, copyrights, trademarks, and trade secrets. This mandate has great impact in developing nations, which had generally weaker IPR standards prior to TRIPS and subsequent agreements. This emerging international regime for protecting IPR raises thorny questions about how the new rules of the game might affect fundamental economic processes, including innovation, trade and economic development. The governments of many developing countries see the new regime as excessively

protectionist and an impediment to their development prospects. They perceive potential problems with abusive monopoly practices, high costs for new medicines, and limited access to scientific and educational materials. Indeed, it is ironic that during a time of significant global liberalization of trade and investment barriers, the IPR system may be raising restrictions on access to the very technology flows that could substantiate the gains from greater trading opportunities. However, expansion of the global IPR regime also bears potential for economic gains. It is possible that the new system will encourage additional investments in R&D and innovation. The ongoing internationalization of commercial R&D could be accelerated. Such investments might increasingly meet the medical, agricultural, and educational needs of people in poor countries. The regime could also improve the mechanisms under which new information goods are transferred across borders, expanding the possibilities for fruitful di
