Activities for Building Character and Social-Emotional Learning Katia S. Petersen 2012 "Hundreds of user-friendly lesson plans help teachers build attitudes of respect and caring, reduce problem behaviors, empower students to solve problems, and educate the whole child socially, emotionally, and academically. The lessons' literature-based connections allow teachers to "build in" rather than "add on" social-emotional learning (SEL) as part of the daily curriculum. Each resource guide offers: - Monthly themes focused on emotions, empathy, relationships, conflict resolution, bullying prevention, problem solving, decision making, teamwork, and self-esteem - Literature-based lessons with curriculum integrations for using the lessons as part of language arts, social studies, science, math, art, and music - Easy-to-implement lesson formats for all activities: Read, Discuss, Do, Relate - Built-in assessments - Reproducible activity handouts in the book and on CD-ROM Field-tested in classrooms across the United States, these activities when fully implemented have resulted in improved school climate, greater parent engagement, increased academic achievement, and reduction in discipline referrals. The Activities for Building Character and Social-Emotional Learning resource guides are essential teaching tools for all preK-8 teachers"--

Safe Schools Ronald D. Stephens 1995 Ways in which school leaders can establish "safe schools" are

detailed in this guide book. It offers suggestions on how to involve students, parents, law enforcement officials, business and community leaders, and other concerned citizens. This resource guide is designed to help administrators accomplish five goals: (1) assess the school climate by identifying top safety issues; (2) determine safe-school goals; (3) develop a plan for reaching safe-school goals; (4) build a support network for policy development and plan implementation; and (5) maintain a system of continuing evaluation. The guide reviews factors that affect school safety and suggests getting started by creating a planning team. A special section addresses how to conduct a school-site assessment, focusing on what to do before the assessment begins; how to gather pertinent data; how to track and monitor school crime; and how to make campuses safer through good environmental design and sensible management and maintenance. The guide suggests that the law is at the heart of safe-school planning, and it defines the guiding parameters of what must be done. Two appendices provide model assessment questionnaires and list sample plans, policies, procedures, and codes. (RJM)

To Err Is Human Institute of Medicine 2000-03-01 Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS--three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence--but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda--with state and local implications--for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors--which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err Is Human asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates--as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

77 Fairly Safe Science Activities for Illustrating Bible Lessons Donald B. DeYoung 2013-10-15 Nothing captures the attention of young people (and adults) like a creative object lesson. This hands-on book gives pastors, teachers, speakers, and homeschoolers 77 exciting science activities that reveal the order and grandeur of creation and encourage an appreciation of all God has made. These easy experiments illustrate the laws of nature, teach Bible principles, and affirm God's power as Creator. With catchy or unexpected results, the demonstrations make Bible truth unforgettable. The clearly explained experiments use common household objects, require little setup, and are illustrated with pictures and diagrams.

Toxicology in Transition Gisela H. Degen 1995-02-14 The volume contains the main papers presented at the 1994 EUROTOX Congress, Basel, Switzerland, August 21-24, 1994. Toxicology has become a less descriptive science because more importance has been placed on the mechanisms underlying toxic effects. This is reflected in symposia and workshops devoted to species differences in organ toxicity, receptor-mediated toxicity and stereochemical effects of xenobiotics. Recent progress in the fields of immunotoxicology, ecotoxicology, and neurotoxicology is highlighted and documented together with the present discussion on harmonized regulatory guidelines.
