The Skill Approach in Education Mehmet Serdar Erciş 2018-07-27 Today, information and technological developments grow at a rapid pace. Social and political life becomes more and more complicated and, in this

process, active citizenship becomes more essential. Knowledge-driven changes in society and economies require individuals to quickly acquire new skills. Otherwise, it is increasingly difficult for employees to adapt to business life and to find a job. Education has to take account of these circumstances, adapt to the rapid developments in the world and educate individuals to continue lifelong learning. For this, skills such as active and independent learning, assertiveness, creativity, self-improvement, lifelong learning are important. Skill teaching differs from knowledge teaching. Skill is the transfer of knowledge to practice. This process involves a learning process that requires the steps of researching, planning, controlling and correcting. The knowledge should be organized, integrated, transferred into practice, mental and physical resources should be activated, and knowledge use should be demonstrated in practice in order to improve the skill. This book contributes to the teaching of skills and includes basic concepts and skills, language skills, science and mathematics skills, psycho-social skills and visual arts skills. It also explains how to teach skills, how to prepare for activities and how to implement activities in educational settings. These applications are intended to draw attention to skill teaching, to raise educators, to increase the success of education, to improve the skills of students, and to enable them to use the skills they have learned in school outside of school and in complex tasks.
